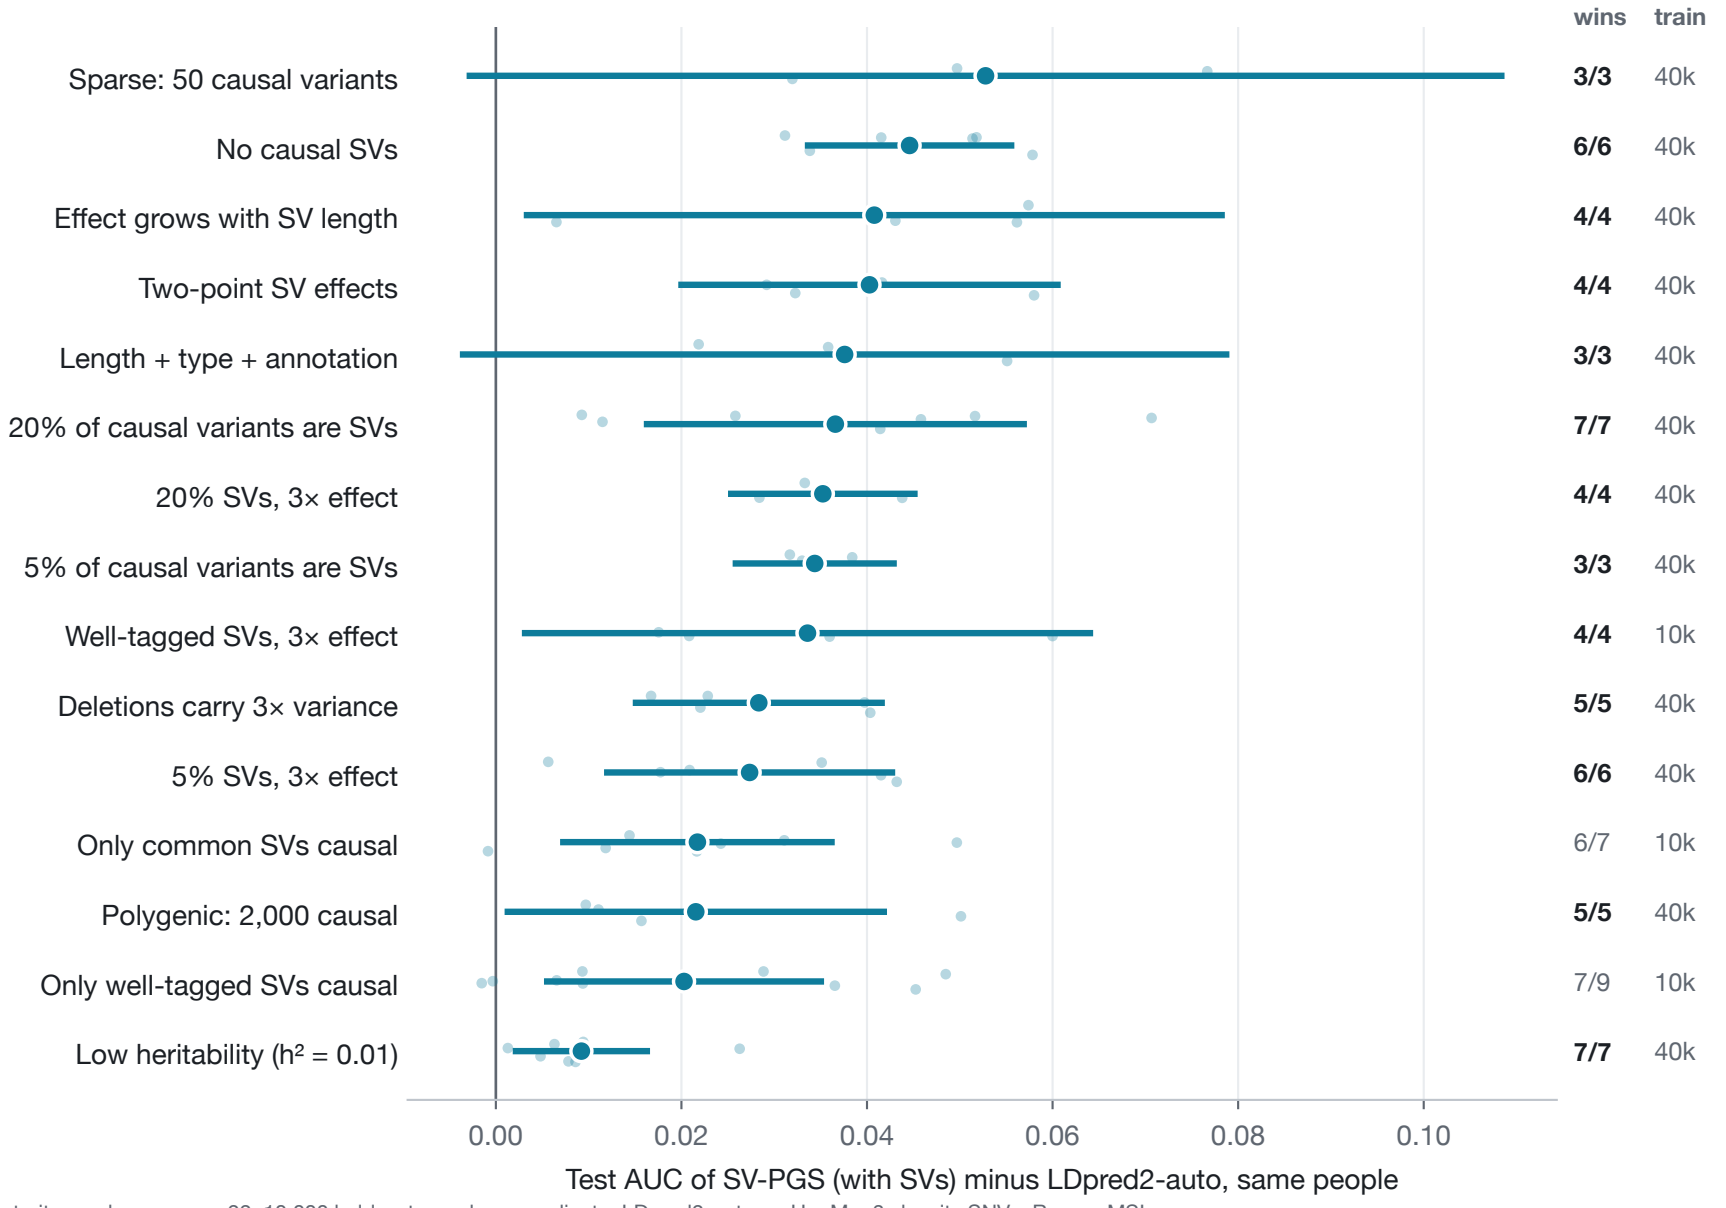
SV-PGS beats LDpred2-auto in 74 of 77 paired replicates, across 15 architectures

Paired difference in held-out AUC per replicate (dots), mean and 95% interval, at the largest training size with ≥ 3 replicates



Simulated binary traits on chromosome 22; 10,000 held-out people per replicate. LDpred2-auto on HapMap3-density SNVs. Run on MSI.
