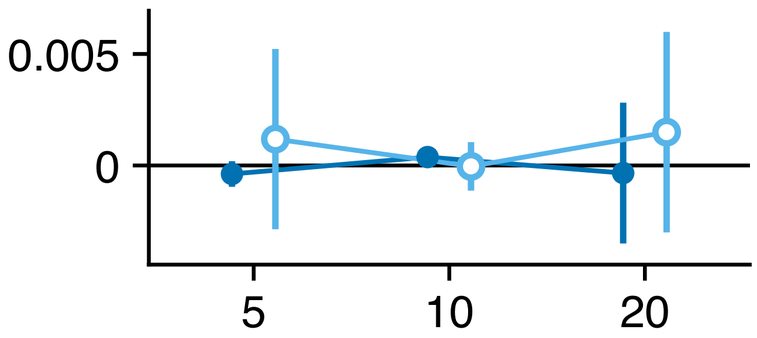
Gain from adding SVs, by training size

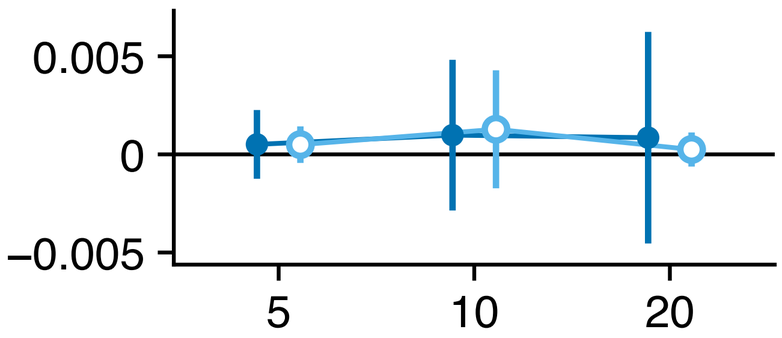
True genotypes — Called SNVs and imputed SVs

Causal SVs

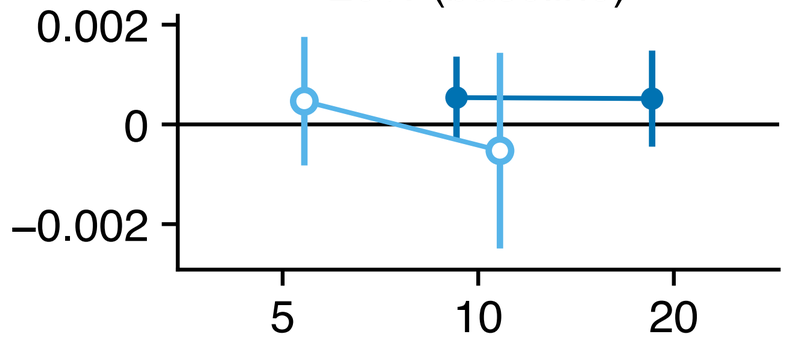
0%



5%

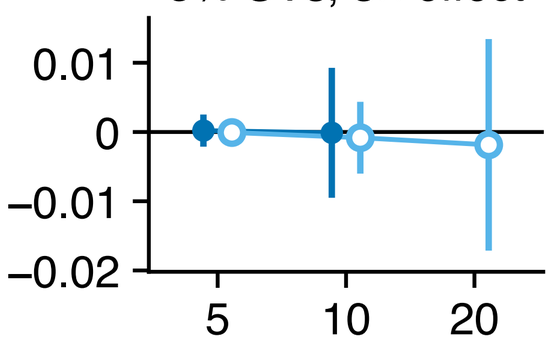


20% (baseline)

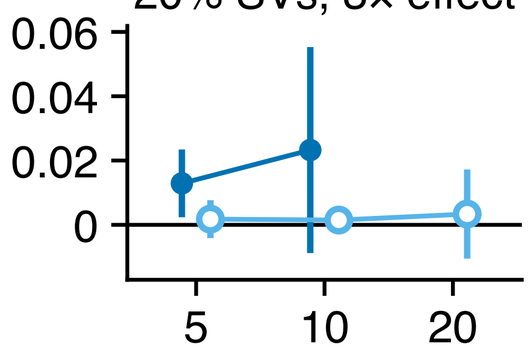


SV effect sizes

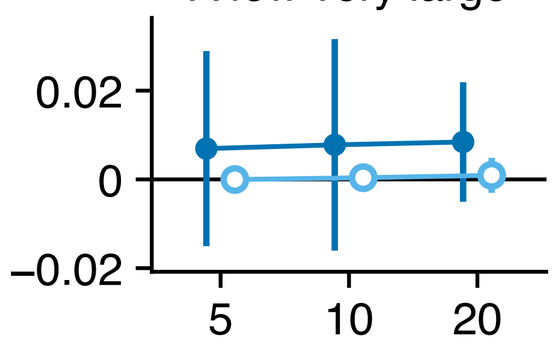
5% SVs, 3× effect



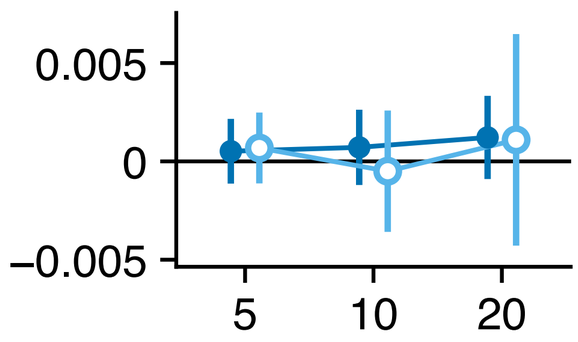
20% SVs, 3× effect



A few very large

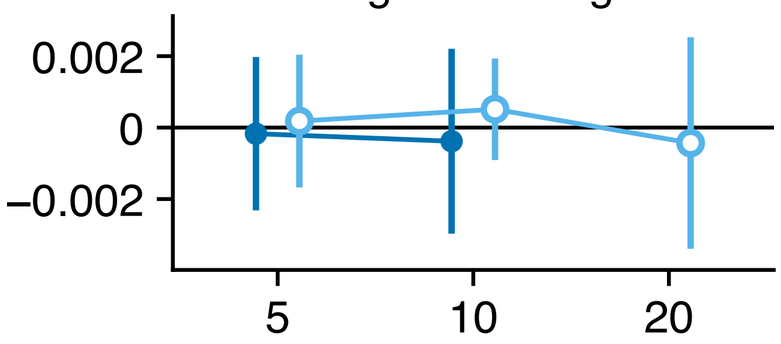


All one size

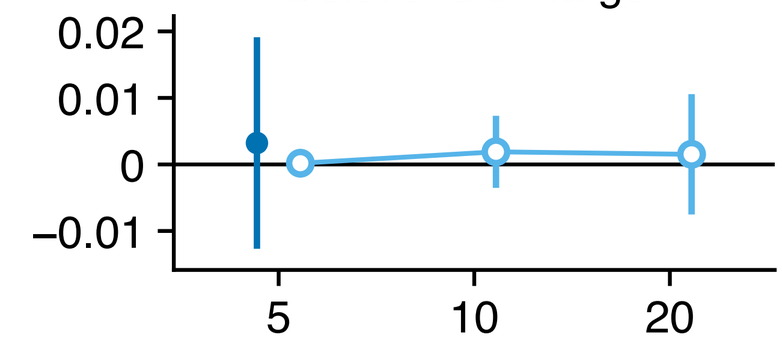


SV effects by feature

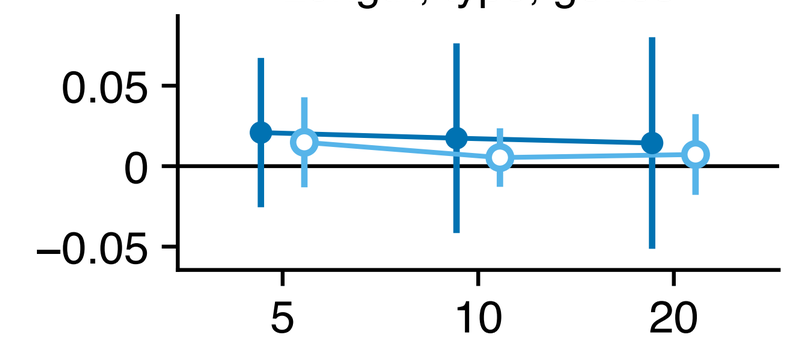
Longer SVs larger



Deletions 3× larger

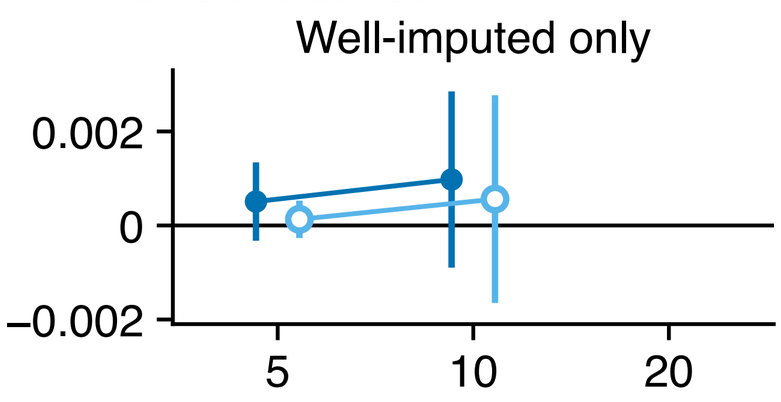


Length, type, genes

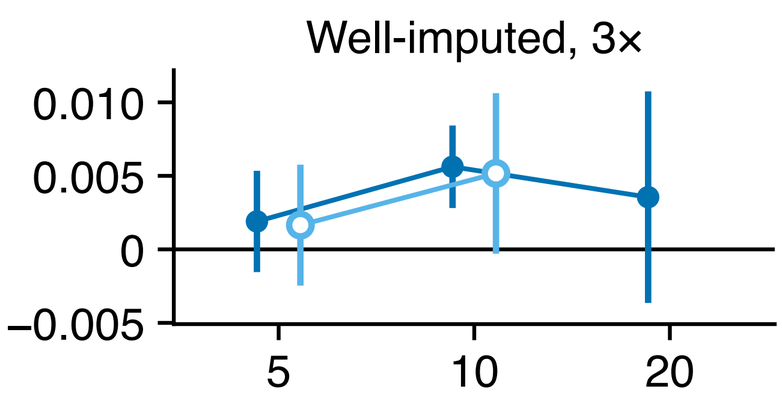


Which SVs are causal

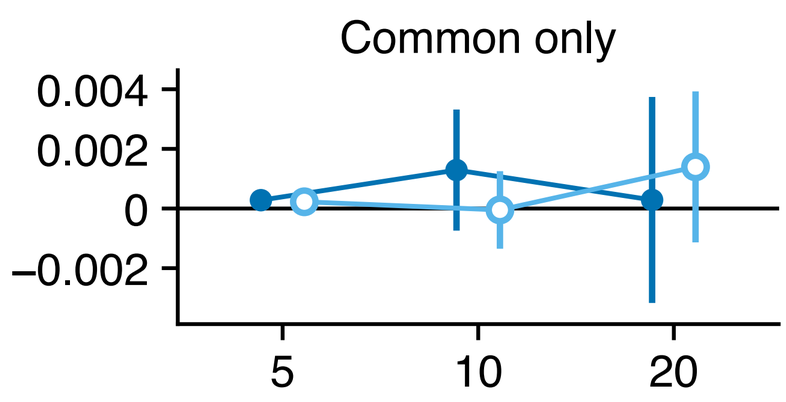
Well-imputed only



Well-imputed, 3×

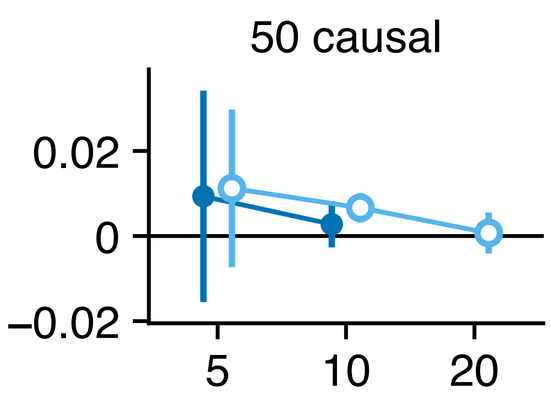


Common only

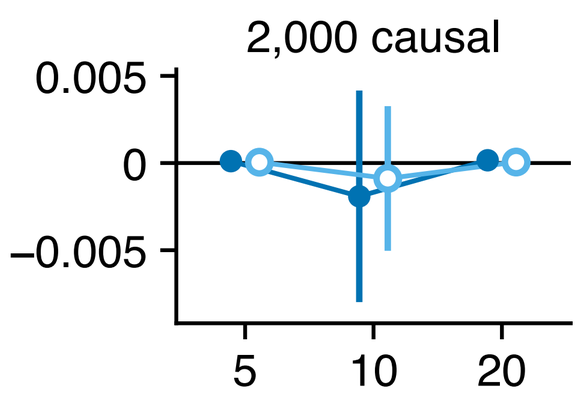


Trait

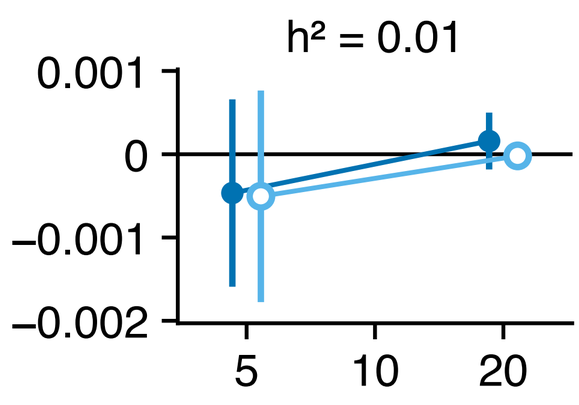
50 causal



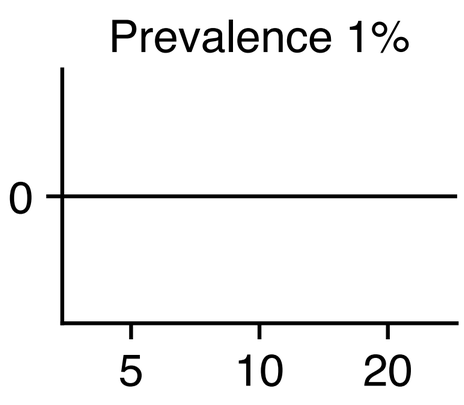
2,000 causal



h² = 0.01



Prevalence 1%



ΔAUC, with SVs − without

Training sample size (thousands)
